Shraddha Sunil Tole

Glasgow,Scotland | +44 7721556745 | shraddhatole2001@gmail.com | LinkedIn | GitHub

SUMMARY

MSc Data Science student at the University of Glasgow with 3 years of professional experience in Python, SQL, ETL, data transformation and enterprise data integration. Experienced in building data-driven solutions, developing database scripts, and working with enterprise systems including Oracle Service Bus and related middleware. Looking to support brand,Sales and Business Intelligence teams as a Data Analyst.

EDUCATION

University of Glasgow — MSc Data Science
Glasgow, Scotland | Sept 2026 - Present

Savitribai Phule Pune University | BE in Information Technology | CGPA: 8.7/10
Pune, India | June 2023

TECHNICAL SKILLS

Programming: Python, SQL, Java, C
Python & Data Science: Pandas, NumPy, Scikit-learn, Matplotlib, Seaborn
Data Analytics& BI : Data Analysis, Data Cleaning, Data Transformation, ETL, Data Processing, Data Validation,PowerBI
Databases: MySQL ,MySQL Workbench
Tools & Frameworks: Anaconda, JDeveloper, Postman, SOAP APIs, REST APIs, Git

WORK EXPERIENCE

Senior Executive - VOIS August 2023 – August 2026

- Developed Python scripts and utilities to automate repetitive technical tasks, data processing activities, and operational workflows.
- Used Python for data extraction, transformation, validation, and file processing across different business processes.
- Created and optimised SQL database scripts for data extraction, transformation, and maintenance, reducing report generation time by 30% and improving analytics accuracy.
- Designed and deployed a Generative AI–based Copilot agent, automating 40% of routine operational tasks and enabling faster, smarter knowledge retrieval.
- Developed and managed 30+ integration solutions using Oracle Service Bus (OSB) and middleware tools, improving data exchange efficiency across enterprise systems by 25%.
- Contributed across the full SDLC, delivering 100% of assigned projects on time with high-quality, scalable outcomes.
- Worked on ETL workflows, including extracting data from source systems, transforming it according to business requirements, validating the output, and transferring it to target systems.
- Received a Star Award in recognition of performance and contribution to project work.

PROJECTS

ShellScope :UK Company Risk radar | Python ,SQL,Power BI **In Progress ,Oct 2026**

- Building a risk-screening tool on public UK Companies House data to flag companies that may be shell or high-risk businesses.
- Collecting, cleaning and joining company , officer and filing records with Python and SQL into an analysis-ready dataset.
- Designing a Power BI dashboard so business users can filter companies by risk flags, region and industry .
-

FraudLens: Card Fraud Detection | Python, XGBoost, SHAP, Streamlit **Oct 2026**
Live demo · **GitHub**

- Built an end-to-end fraud detection model on 1.8M card transactions, engineering behavioural features (spend vs. customer baseline, home-to-merchant distance, 24-hour payment velocity) with leakage-safe, time-based validation.
- Achieved PR-AUC of 0.91 with XGBoost vs 0.17 for a logistic regression baseline, catching 93% of fraud at 3.7 false alarms per 1,000 payments on unseen future data.
- Set the alert threshold by minimising expected business cost rather than the default 0.5, reducing fraud-related losses by 95% ($1.13M → $53k) on the test period.
- Explained individual decisions with SHAP and deployed an interactive Streamlit web app that scores transactions and shows the reasons behind each decision.

DR. CNN (Python,CNN, Deep learning,Flask,ReactJS) November 2022 – March 2023

- Developed an academic deep learning project for detecting diabetic retinopathy from retinal images.
- Applied Convolutional Neural Networks (CNNs) for image classification.
- Evaluated the model's ability to classify retinal images based on learned visual patterns.

CERTIFICATES AND ACHIEVEMENTS

Star Award – VOIS , December 2024
Java Development Internship Completion - Apptware Solutions, Aug2022 - Nov 2022
Web Development Internship — GenioBITS, May 2021 – Aug 2021
